## CAD/CAM Training & CNC Machining Workshops

### CNC Basics for Everyone

When you hear the words CNC or CAD/CAM design, it can be intimidating. If fears of having to learn a new method of woodworking, using a computer to create designs or just running a complicated machine keeps you from exploring this amazing method of creating unique masterpieces through CNC machining, this then is the place to start. In this course I will walk you through the basics of designing your projects in the Vectric CAD/CAM design software and the fundamentals of setting up and carving those projects on the CNC machine. Here we will discover your strengths and inspire your creativity.

### CNC Project Design – An Introduction to Vectric CAD/CAM

In this seminar we will look at the approach to job setup and design within the Vectric CAD/CAM design software through a series of different projects.

### CNC Motion Control & Work Setup

In this seminar we look at the CNC motion controller software and go through the features of the program, importing the G-Code toolpath files and explain the process of work holding, tool changes and understanding what is happening during the carving of a project.

### Advanced CNC Training - Paid \$50

In this paid Seminar we will be discussing the methods of working with 3D components within the Vectric CAD/CAM design software.

- 3D Modeling within Vectric VCarve & Aspire
- 3D Model Composition
- 3D Model Embossing

### 2019 Schedule

Friday - 1:00 pm

Friday - 3:00 pm

Friday - 5:00 pm

Saturday - 11:00 am

Saturday - 1:00 pm

Saturday - 3:30 pm to 5:30 pm

Sunday - 11:00 am

Sunday - 1:00 pm
